

dōTERRA For Kids, Babies and Infants

Essential Products

***NOTE: This information is to be used with doTERRA Essential Oils
as they are the purest, most potent essential oils available.***

dōTERRA produces many products that are suitable for use on babies, infants and kids. From newborn right through to adulthood.

Hand Foot and Mouth Disease

Prevention is better than cure. Make sure your child doesn't come home with bacteria and germs and keep them around the house. Try dōTERRA's OnGuard® range of products from our OnGuard® blend to OnGuard® wipes and even OnGuard® throat drops. Diffusing OnGuard® into the air aids eliminating germs and bacteria brought home by your child from school. And before bringing your child to crowded places, drop a few drops of OnGuard® essential oil and rub it beneath your child's feet.

It's an instant immunity booster!

dōTERRA Essential Oils for Babies & Children

dōTERRA essential oils are safe to use on children, babies and even newborns.

Because of the sensitive nature of their skin, when applying to newborns or infants dilute the oils. A good ratio to start with is 1-2 drops of oil with 2 TBLS of fractionated coconut oil. Chose some of the gentler oils like lavender, frankincense, tea tree, ginger, lemon, orange, sandalwood, roman chamomile and ylang ylang. Digestzen is an excellent blend to use for stomach upsets. Be careful to keep the oils away from babies hands where they might be able to rub them in their eyes.

Possible uses:

Babies

COLDS

Tea tree, Lemon, or Lavender. Diffuse 2 drops of either at bedtime or during the day. Mix 1 drop of either with 1 TBL of a good carrier oil and massage the upper chest and back at each diaper change.

COLIC

Mix 1 drop of Lavender with 1 TBL of a good carrier oil. Gently massage a few drops into the abdomen in a clockwise direction following the natural movement of the colon.

CONSTIPATION

Lavender or Roman Chamomile. Add a drop of either to 1 TBL of good carrier oil and massage in a clockwise motion on the tummy, following the natural movement of the colon.

COUGHING

Mix 1 drop of Lavender with 1 TBL of a good carrier oil and rub a small amount on the chest and back.

CRYING

Place a small drop of Lavender or Roman Chamomile on your hand or a tissue and just let the baby smell the oil.

DIARRHEA

Mix 1 drop of Roman Chamomile with 1 TBL good carrier oil, gently massage 2-3 drops on the tummy in a clockwise motion following the natural movement of the colon.

NAPPY RASH

Combine 1 drop of Chamomile and 1 drop of Lavender with 1 drop of whole milk. Add to baby's bath water and swish around before bathing baby. Keep the oils away from baby's eyes.

FEVER

Mix 1 drop of Lavender with 1 TBL of quality carrier oil. Massage a small amount onto the bottoms of the feet and apply to the back of the neck and behind the ears, cover the feet with socks.

JAUNDICE

Mix 1 drop of Geranium with 1TBL of quality carrier oil. Apply to the bottoms of feet and over the liver area. Do not apply oils within ½ hr before or after UVA treatment.

TEETHING

Mix 1 drop of Roman Chamomile or Lavender with a TBL of quality carrier oil. Use a small amount to gently massage outside of the face along the jaw line.

TUMMY ACHE

Mix 1 drop of Roman Chamomile and 1 drop of Wild Orange with 2 TBL of quality carrier oil. Add 1 Tsp of mixture to warm bath water, swishing around before bathing baby. Avoid getting oils in baby's eyes.

Other essential oils commonly used on infants: Grapefruit, Lemon, & Tangerine

Children:

It is truly magical to be able to sooth a burn or calm a distraught child with these beautiful essential oils. They will learn to love them and look forward to their benefits from very early on.

COLDS

Dilute 1-2 drops of Thyme or Lemon in 2 TBL of quality carrier oil and massage a little on neck and chest.

CONSTIPATION

Dilute 1-2 drops of Rosemary, Ginger or Orange in a TBL of quality carrier oil and massage on stomach and feet.

CUTS & SCRAPES

Add 5 drops of Lavender and 5 drops of Tea tree to warm water, use to clean the wound. Apply 1 drop of Lavender to a band-aid and cover the wound. The Lavender may sting if applied directly.

EARACHE

Apply Tea tree and Lavender to the outside of ear or apply a of each to a cotton ball and set in the ear. Do not apply oils directly into the ear canal.

FEVER

Dilute a drop of Lavender and a drop of Peppermint in 2 TBLS of quality carrier oil and massage a small amount on back of neck, behind the ears and on the back.

FLU

Dilute 1 drop of Cypress or Lemon in an unscented bath gel and use in a warm bath.

MINOR BURNS

Cool burn first with cold water. If the skin is not broken apply 2 drops of Lavender directly to the burn. If the skin is broken apply the Lavender on the perimeter of the burned area. Apply 5 drops of Lavender to a cold, DRY cloth and gently hold over burned area.

SUNBURN

Add 5 drops of Lavender to 1 tsp of Aloe Vera and apply to sunburned area.

Other oils commonly used for children: Frankincense, Geranium, Sandalwood, Thyme and Ylang Ylang

The bottoms of the feet are really one of the best places to apply oils. Interesting to me is that oils even as hot as oregano can be applied to the bottoms of the feet without discomfort. Be sure to put socks on to prevent getting these kinds of oils on other areas of the body that are more sensitive.

TerraShield® Repellent Blend

Product Description

TerraShield is a proprietary blend of Certified Pure Therapeutic Grade essential oils including Citronella, Cedarwood and several other carefully balanced oils blended in a base of 100% pure fractionated coconut oil.

Concept

Everyone loves being outdoors, but nobody likes becoming lunch for pesky bugs that can ruin your picnic in the woods. To avoid itchy bites, experts recommend using an effective insect repellent. The most common repellents are products that contain DEET, a powerful and potentially toxic chemical that is known to cause negative side-effects, including seizures.

HEAD LICE

Three different types of lice infestations are common on the human body head lice, body (sucking) lice, and pubic (crab) lice. The louse is a small, wingless, insect parasite that lives off of the blood or other elements of the skin. Since they do not fly or jump they are spread by human contact or exchange of common clothing, bedding, hair brushes, etc. The common symptoms of an infestation are reddish skin, inflammation and itching of the irritated skin. Lice may be visually detected. They are about 1/8 inch long and their eggs (nits) are about 1/16 inch long. Head lice, common in children, are usually in the hair on the back of the neck or around the ears. The egg will be attached to the hair near the root.

To prevent lice:

Mix the following and apply to the scalp:

- 5 drops tea tree
- 5 drops lemon
- 5-10 drops fractionated coconut oil

Let stand for at least ½ hour. Shampoo with good quality shampoo (SanoBella) with 5 drops of tea tree added to a teaspoon of shampoo. Follow with the tea tree shampoos daily for the following week.

** Massage 2-5 drops of TerraShield blend to scalp and neck 1-2 times daily. Spray jacket and any other clothing that could be exposed.*

To treat lice:

Mild-Moderate Case: Mix the following and apply to the scalp.

- 5 drops tea tree
- 5 drops lemon
- 5-10 drops fractionated coconut oil

Apply oils and after the application cover the head with a shower cap for at least 1 hour. Follow this with a careful combing with a lice comb. Repeat daily until no signs of lice or nits are visible. Continue with tea tree shampoos daily for a week.

** Continue to massage 2-5 drops of TerraShield blend to scalp and neck 1-2 times daily and spray jacket and any other clothing that could be exposed.*

Severe Case:

Mix the following and apply to the scalp every night for a week:

- 5 drops eucalyptus
- 5 drops rosemary
- 5 drops lavender
- 5 drops tea tree
- 10 drops fractionated coconut oil

Apply oils, comb with a lice comb then cover with a shower cap for the night. Be careful to protect the eyes from any oils. Follow the next morning with a good quality shampoo (SanoBella) with 5 drops of tea tree added to a teaspoon of shampoo.

** Continue to massage 2-5 drops of TerraShield blend to scalp and neck 1-2 times daily and spray jacket and any other clothing that could be exposed.*

Essential Oils and Kids

Contributed by Nicole Stevens, MSc

If you have kids in your house, I bet you are discovering the powerful ways in which doTERRA oils and products can support a healthy lifestyle. Perhaps you're a little nervous to use oils on your kids; maybe you're not sure if they're entirely safe for the younger set. Well, as a scientist who has studied essential oils for more than 15 years and as a mama to four amazing kids, let me tell you that doTERRA's products can be wonderful for children. We enjoy them daily in our house. If these products are used with care and common sense, you can safely reap all the benefits they have to offer.

If you are nervous about using essential oils on the younger set, here are some things to keep in mind:

1. Essential oils are not novel. While it may seem like essential oils are just the latest and greatest thing, they've actually been used by humans for millennia. Essential oils contain constituents that will be recognized by our body systems and handled appropriately. Rest assured that if you use essential oils on your children, you're not inventing the wheel.
2. Kids are not tiny adults. Remember that oils are potent, and you only need a very small amount to achieve efficacy, especially when it comes to children. A little bit goes a very long way. Adjust amounts accordingly.
3. Dilute. Kids' skin is different from adult skin; it's thinner and generally more sensitive. Even though most oils tend to be non-irritating on the skin (especially on the bottom of the feet, where the skin is thickest), it's a great idea to dilute

essential oil in a good carrier oil before applying to children. You'll still get the same benefits of the essential oil—you're just adding extra moisture and pampering delicate child skin. The doTERRA Touch products are great for this, by the way. They're our favorites!

4. Diffuse. Aromatherapy is an excellent way to enjoy the benefits of essential oil without the worry of skin reactions. Inhaled oils have long been studied for their ability to enhance feelings of relaxation, encouragement, excitement, focus, and well-being. Additionally, diffused oils may support a healthier indoor environment. That's always a bonus when you've got a houseful of kids.

5. Oils FOR kids, not BY kids. The labels on doTERRA's oil bottles remind us to keep them out of reach of children. Kids won't understand the potency of the essential oils—they only know that these lovely liquids smell divine, and may go overboard in using them. Adults, not children, should always be doing the oil applications, and judiciously at that.

6. Be informed. doTERRA has mountains of information about safe usage of essential oils on their websites. There's an entire team of support staff who answer questions about essential oils and products (just email productsupport@doterra.com). And don't be afraid to chat about oil usage with your family doctor or pediatrician—medical professionals like having a holistic picture of their patients' health situation, and they have access to other medical literature that can help guide your decisions.

Not sure where to start? Here are some of the favorite doTERRA products in our house, and ways they can be used with children.

1. doTERRA Touch™. These products are awesome because they come pre-diluted. Young skin is different from adult skin—it's thinner, more delicate, and generally more sensitive. It's a great idea to dilute any essential oils before applying them to children, and this kit takes the mess out of dilution.

2. doTERRA OnGuard® products. We love all the products containing doTERRA OnGuard, and they are very kid-friendly. The toothpaste is wonderful. My kids enjoy the taste and I enjoy that it's not full of chemicals that even I can't pronounce. The cleaner concentrate makes the bathroom fresh and I don't have to worry about toxic residue. And, of course, we diffuse doTERRA OnGuard like crazy during the winter months.

3. doTERRA Balance® and doTERRA Serenity®. These blends have done wonders for our family. We recently moved, and my kids were having trouble sleeping in their new rooms. A nice massage with these oils (diluted and applied to soles of feet) helped everyone feel relaxed and grounded in the new surroundings. We often return to these blends when the stresses of life have everyone worked up.

4. Citrus oils. We diffuse oils every day, and the citrus oils are my kids' favorite. They are so uplifting and energizing—perfect for the dreary winter days when no one feels like rolling out of bed. It's a natural way to chase off the post-holiday blues. Our favorites are Wild Orange, Lemon, and Grapefruit. We even apply the oils to the palms of our hands and cup them to our noses for an easy "scent tent." (Just be sure to avoid sun exposure after applying citrus oils topically!)

5. Correct-X®. We always have this product on hand during our outdoor adventures; it's great to have something natural and effective, yet gentle and non-irritating, for sensitive young skin.

Yes, we live doTERRA in my house. It's fun to see my children starting to understand which oils might be good in various situations and asking for them as needed. They're learning to be cognizant of their own health while actively looking for natural ways to support well-being. I love it!

How to get a baby to sleep with essential oils

It can be so easy to help your baby sleep with essential oils. One of the most powerful, yet often underestimated, ways to use oils is aromatically. Just smelling a pure, therapeutic grade essential oil can have a profound effect on us physically, emotionally and mentally. We can accomplish this through diffusing, putting oils on a favorite toy or applying topically.

I am a mother of 5 and since my youngest was born we've been using essential oils as part of her "time to go to sleep" routine too. With her, my favorite is Serenity blend. Here are some of my tips:

1. Use the same oil consistently when its time to sleep.

The same is true about what your before-bed rituals are, change them in the same place, use the same sound machine setting or CD, etc. This teaches babies and children what to expect. Adding an essential oil to the routine not only signals to them that its time to sleep again but actually helps them fall asleep because of the calming properties of a pure essential oil like those from our favorite company.

Gentle oils for sleep are Lavender, Serenity blend, Vetiver, Roman Chamomile and Frankincense.

Always **dilute** 1-3 drops of essential oil per 1 Tablespoon of carrier oil (virgin or fractionated coconut oil, olive, sweet almond, jojoba, etc) and 1-3 drops of essential oil per 1 teaspoon for children and adults.

I made up a little roller bottle of Serenity blend, 1-2 drops per 10mL roll-on bottle, and would put it on behind her ears, on her feet, across her jammies, across her sheets, and on me since I'd be rocking her. Whatever worked best that night is what I did, sometimes all of those, sometimes just one or two. Every few months you can change it up.

2. When your baby is old enough to sleep with a little blanket or beloved stuffed animal friend.

This as a safe and easy way to help baby sleep with essential oils.

Just add a drop or two to the stuffed animal or blanket and they can cuddle up with it and fall easily asleep!

**Do not use strong oils undiluted on their animal or blanket, like peppermint, eucalyptus or cinnamon as it could burn their eyes or be too strong for them to breathe in.*

**Please never use a blanket in your baby's crib before 12 months of age. Please follow all safety guidelines for stuffed animals, toys and blankets near your baby/toddler when they sleep.*

3. When your child is old enough, let them help!

We have several roller bottles around just for our youngest, with oils like Balance blend (great for tantrums), Serenity and Frankincense. I typically use about 5 drops in a 10mL roller for her age now, and the rest I fill with fractionated coconut oil. She LOVES to roll them on her own feet and put them on her babies, plus I love that it's so safe. It makes them feel special to put on their own oils and develops a love for natural solutions and taking care of themselves. My daughter is 20 months now and she will remind me to put oils on her bunny if I forget.

4. Here's a popular blend to use to calm children.

5. Finally, a diffuser is a great way to deliver a calming essential oil consistently through the night.

For overnight use its best to have one without a light, since that disrupts sleep patterns, as well as either an automatic shut-off or controls that allow you to use it all night with a low output.

Are you desperate for some more sleep? Would you like some guidance on how to use help your baby sleep with essential oils?

Happy sleeping!

How Do Essential Oils Fight Allergies?

An allergic reaction begins in the immune system. An allergen is a substance that tricks the immune system — making it think that the allergen is an invader. The immune system then overreacts to the allergen, which is really a harmless substance, and produces Immunoglobulin E antibodies. These antibodies travel to cells that release histamine and other chemicals, causing the allergic reaction.

The most common causes of an allergic reaction include:

- Pollen
- Dust
- Mold
- Insect stings
- Animal dander
- Food
- Medications
- Latex

These allergens will trigger symptoms in the nose, throat, lungs, ears, sinuses and lining of the stomach or on the skin. The question here still remains — if these common causes have been around for thousands of years, then why have the allergy rates increased in recent history?

One of the theories behind explaining the increase in allergies has to do with inflammation, the root of most diseases. The body responds in a certain way to an allergen because the immune system is in overdrive. When the body is already dealing with high inflammation, any allergen sets off an increased reaction. That means that when the body's immune system is overworked and stressed, introducing an allergen sends the body into overreaction.

If the immune system and inflammation within the body was balanced, the reaction to the allergen would be normal; however, today these reactions are exaggerated and lead to the next unneeded allergic reaction.

One of the most amazing benefits of essential oils are their ability to fight inflammation and boost the immune system. Essential oils for allergies will help to detoxify the body and fight infections, bacteria, parasites, microorganisms and

harmful toxins. They reduce the bodies susceptibility to outside sources and reduce the overreaction of the immune system when it is faced with a harmless intruder. Some exceptional essential oils even work to relieve respiratory conditions and increase sweat and urination — helping with the elimination of toxins.

Top 5 Essential Oils for Allergies

1. Peppermint Oil

Inhaling diffused peppermint oil can oftentimes immediately unclog the sinuses and offer relief to scratchy throats. Peppermint acts as an expectorant and provides relief for allergies, as well as colds, coughs, sinusitis, asthma and bronchitis. It has the power to discharge phlegm and reduce inflammation — a leading cause of allergic reactions.

A 2010 study published in the *Journal of Ethnopharmacology* investigated the effects of peppermint oil in the tracheal rings of rats. The results suggest that peppermint oil is a relaxant and exhibits antispasmodic activity, inhibiting contractions that causes you to cough.

Another study published in the *European Journal of Medical Research* suggests that peppermint oil treatment has anti-inflammatory effects — reducing the symptoms of chronic inflammatory disorders such as allergic rhinitis and bronchial asthma.

Remedy: Diffuse five drops of peppermint essential oil at home to unclog sinuses and treat a scratchy throat. This will also help to relax the nasal muscles, enabling the body to clear out mucus and allergens like pollen. To reduce inflammation, take 1–2 drops of pure peppermint essential oil internally once a day. It can be added to a glass of water, cup of tea or smoothie. Peppermint oil can also be applied topically to the chest, back of neck and temples. For people with sensitive skin, it is best to dilute peppermint with coconut or jojoba oil before topical application.

2. Basil Oil

Basil essential oil reduces the inflammatory response of allergens. It also supports the adrenal glands, which are involved in producing over 50 hormones that drive almost every bodily function. Essentially, basil essential oil is helping your body to react appropriately to a threat by rushing blood to your brain, heart and muscles. Basil oil also helps to detoxify the body of bacteria and viruses, while fighting inflammation, pain and fatigue. Studies prove that basil oil shows antimicrobial activity and can kill bacteria, yeast and mold that can lead to asthma and respiratory damage.

Remedy: To fight inflammation and regulate the overreaction of the immune system when faced with an allergen, take one drop of basil oil internally by adding it to soup, salad dressing or any other dish. To support the respiratory system, dilute 2–3 drops of basil oil with equal parts coconut oil and apply topically to the chest, back of neck and temples.

3. Eucalyptus Oil

Eucalyptus oil opens up the lungs and sinuses, thereby improving circulation and reducing symptoms of allergies. Studies have shown that it produces a cold sensation in the nose that helps to improve airflow. Eucalyptus contains citronellal, which has analgesic and anti-inflammatory effects; it also works as an expectorant, helping to cleanse the body of toxins and harmful microorganisms that are acting as allergens.

A 2011 study published in *Evidence-Based Complementary and Alternative Medicine* found that eucalyptus essential oil was an effective treatment for upper respiratory tract infections. Patients who were treated with eucalyptus spray reported an improvement in the severity of their most debilitating respiratory tract infection symptoms compared to participants in the placebo group. Improvement was defined as a reduction of sore throat, hoarseness or cough.

Remedy: To treat respiratory issues associated with allergies, diffuse five drops of eucalyptus at home or apply it topically to the chest and temples. To clear the nasal passages and relieve congestion, pour a cup of boiling water into a bowl and add 1–2 drops of eucalyptus essential oil. Then place a towel over your head and inhale deeply for 5–10 minutes.

4. Lemon Oil

Lemon oil supports lymphatic system drainage and helps with overcoming respiratory conditions. Studies have shown that lemon essential oil inhibits the growth of bacteria and boosts the immune system. When diffused at home, lemon oil can kill bacteria and eliminate allergy triggers in the air.

Adding 1–2 drops of lemon essential oil to water also helps with pH balance. Lemon water improves immune function and detoxifies the body. It stimulates the liver and flushes out toxins that can lead to inflammation and an overreactive immune system. Lemon water also stimulates white blood cell production, which is vital for immune system function because it helps to protect the body.

Lemon essential oil can also be used to disinfect your home, without depending on alcohol or bleach. It will remove bacteria and pollutants from your kitchen, bedroom and bathroom — reducing the triggers inside of your home and keeping the air clean for you and your family. This can be especially helpful as the seasons change and allergens from outside are being brought into your house on shoes and clothes.

Remedy: Add lemon oil to your laundry detergent, mix a couple of drops with water and spray it on your couches, sheets, curtains and carpets.

5. Tea Tree Oil

This powerful oil can destroy airborne pathogens that cause allergies. Diffusing tea tree oil in the home will kill mold, bacteria and fungi. It is an antiseptic agent and it has anti-inflammatory properties. Tea tree oil can be applied to the skin to kill bacteria and microorganisms; it can also be used as a household cleaner to disinfect the home and eliminate allergens.

A 2000 study conducted in Germany found that tea tree oil exhibits antimicrobial activity against a wide range of bacteria, yeasts and fungi. These microbes lead to inflammation and force our immune system to work on overdrive.

Remedy: Use tea tree oil on skin rashes and hives or as a household cleaner. When using tea tree topically, add 2–3 drops to a clean cotton ball and gently apply to the area of concern. For people with sensitive skin, dilute tea tree with a carrier oil first, like coconut or jojoba oil.

How to Use Essential Oils for Allergies

Food Allergies — Take 1–2 drops of lemon or peppermint oil internally to relieve the symptoms of a food allergy. This will help to detoxify the body and eliminate the allergens through sweat or urination.

Skin Rash & Hives — Use tea tree or basil oil topically to treat skin rashes and hives. Add 2–3 drops to a cotton ball and apply to the affected area. Layering oils over the liver area is another way to treat skin irritations because it helps the liver to flush out toxins that burden the skin. Dilute 3–4 drops of tea tree oil with coconut oil and rub it into the liver area.

Seasonal Allergies — Disinfect your home with lemon and tea tree oil; this will eliminate triggers and cleanse the air and your furniture. Add 40 drops of lemon oil and 20 drops of tea tree oil to a 16-ounce spray bottle. Fill the bottle with pure water and a little bit of white vinegar and spray the mixture on any area in your home.

To reduce respiratory issues associated with seasonal allergies, try my Homemade Vapor Rub; it delivers a soothing feeling that will open up the airways and make it easier to breathe.

Allergy Blend — Combine 2–3 drops of peppermint, eucalyptus and lavender oil with one teaspoon of coconut oil and massage the mixture into the temples, behind the ears and into the bottoms of the feet.

Possible Side Effects

When using these special essential oil for allergies, I don't recommend that you take tea tree oil internally; it's best to use tea tree aromatically or topically. When using any of these oils topically, dilute with a carrier oil, especially when using on sensitive skin or one sensitive areas, like under the eyes or on the neck.

When using essential oils internally, a little goes a long way. Only consume 1–2 drops a day for one month. Then take a two-week break and start the treatment again.

Top Essential Oils for Coughs, Cold, and Congestion

Colds, allergies, and other respiratory conditions can be quite the nuisance. While colds are most common during fall and winter, environmental allergies are most often seen in spring and summer. The result in either case is often a hacking cough, congestion, sneezing, a sore throat, and a general feeling of fatigue. Luckily, there are essential oils for a dry cough that provide relief. Below are a detailed descriptions for 15 of the top essential oils for coughs and congestion.

1. Lemon

Research shows that lemon essential oil can boost the immune system and inhibit the growth of bacteria. Lemon oil is one of the most effective essential oils for cough and congestion. It's made from lemon skin, and is used for sore throats due to its anti-inflammatory, antioxidant, and antibacterial properties. Scientific evidence shows that lemon essential oil can boost the immune system and inhibit the growth of bacteria. In a study published in the Journal of Antimicrobial Chemotherapy in 2001, the antibacterial action of lemon oil was found to be effective against cold and allergy symptoms.

2. Frankincense

Pure frankincense. Frankincense oil is a great anti-inflammatory for clearing the lungs and nasal passages, and regulating breathing patterns. Frankincense oil is one of the most powerful oils around. In fact, at one point frankincense was valued even more than gold. Today, frankincense oil is a great anti-inflammatory for clearing the lungs and nasal passages, and regulating breathing patterns. In particular, it can help eliminate phlegm in the lungs. In the treatment of coughs or colds, use two to three drops of frankincense oil in your diffuser.

3. Lavender

Lavender is especially useful for respiratory disorders and symptoms such as colds, influenza, coughs, and sinus congestion. Lavender is one of the most common essential oils available. It's especially useful for respiratory disorders and symptoms such as colds, influenza, coughs, and sinus congestion; it can ease breathing problems when phlegm is trapped within the sinuses and lungs. Apply a few drops of lavender oil on the back, neck, or chest for relief.

4. Peppermint

Studies suggest that the antispasmodic activity in peppermint oil helps relieve coughing.

Peppermint is an essential oil best known for its antiseptic, antiviral, antibacterial, anti-inflammatory, antimicrobial, antispasmodic, and expectorant properties. Peppermint is a common treatment for sinus infections, respiratory infections, coughs, colds, and sore throats. A study published in the Journal of Ethnopharmacology in 2010 suggests that the antispasmodic activity in peppermint oil helps relieve coughing. The menthol in peppermint oil is thought to calm and soothe sore throats, while also relieving coughs by thinning mucus.

5. On Guard Blend

On Guard is best used as a throat spray to help treat coughs or sore throats. On Guard is an essential oil blend that combines wild orange, cinnamon bark, eucalyptus, clove bud, and rosemary. Legend has it that this essential oil blend was created during a great plague. They were protected from the plague by rubbing themselves all over with the oil blend before entering the homes of plague victims. This blend is known for its antibacterial, antiseptic, and antiviral properties, and is best used as a throat spray to help treat coughs or sore throats.

6. Tea Tree Oil

Tea tree oil contains antimicrobial, antiseptic, and antiviral properties. It's a great essential oil for bronchial congestion. Tea tree oil has been found to exhibit protective activity against bacteria, fungi, and yeast, according to a 2000 study from a German research team. These microbes can cause inflammation, which depletes the immune system and leads

to symptoms including coughs and congestion. Fortunately, tea tree oil contains antimicrobial, antiseptic, and antiviral properties. It's a great essential oil for sore throats, coughs, and bronchial congestion. For relief, simply apply 10 to 15 drops of tea tree oil as a cough remedy on your neck and sinuses.

7. Oregano Oil

Oregano oil contains the antimicrobial active ingredients carvacrol and thymol. Oregano oil is powerful antiviral essential oil. A prospective randomized double-blind and controlled study published in the journal Evidence-Based Complementary and Alternative Medicine in 2010 found that a spray containing essential oils such as oregano oil, rosemary, peppermint, and eucalyptus resulted in significant and immediate symptom relief from upper respiratory ailments including coughs and sore throats. Oregano oil contains the antimicrobial active ingredients carvacrol and thymol ; it's the carvacrol that is thought give oregano oil its potency.

8. Eucalyptus Oil

Eucalyptus oil is useful in the treatment of congestion and upper respiratory infections. Eucalyptus oil is known to reduce respiratory inflammation, and loosen mucus in the lungs. But the use of eucalyptus is not just limited to natural remedies—it's found in many over-the-counter products for cold, cough, and congestion relief. Eucalyptus oil's health benefits are due to its abilities to improve respiratory circulation, provide antioxidant protection, and stimulate the immune system. The active ingredient in eucalyptus oil is called cineole, and studies have long indicated that eucalyptus oil is useful in the treatment of congestion and upper respiratory infections.

9. Thyme

Research shows that thyme oil can help support the immune and respiratory systems. Thyme oil is one of the better essential oils for coughs and congestion due to its antioxidant, antibacterial, and antimicrobial properties. These effects can help support the immune and respiratory systems. In a study published in the journal Medicinal Chemistry in 2011, researchers examined thyme oil's response to 120 strains of bacteria that were isolated from patients with respiratory infections. The results found that thyme oil exhibited strong activity against all the bacteria strains, which means that thyme oil is perfect for sore throats, coughs, and congestion due to colds.

10. Juniper Berry

Juniper berry essential oil contains more than 87 active ingredients including antifungal, antioxidant, antibacterial, and antimicrobial agents. Juniper berry is an essential oil with a woody and sweet smell, and is found in many fragrance sprays, aromatherapy blends, and household cleaning products. Juniper berry essential oil is commonly used for sore throats and respiratory infections. Research shows that juniper berry essential oil contains more than 87 active ingredients including antifungal, antioxidant, antibacterial, and antimicrobial agents. A 2003 study published in the journal Phytotherapy Research found that the antimicrobial activity of juniper oil is likely due to a combination of compounds called beta-pinene, p-Cymene, and alpha-pinene.

11. Clove

Clove oil exhibits antimicrobial activity against a number of multi-resistant bacteria. Clove oil is an essential oil used to boost the immune system and relieve sore throats, due to its antiviral, anti-inflammatory, stimulating, antiseptic, antifungal, and antimicrobial properties. A study published in the journal Phytotherapy Research in 2007 found that clove oil exhibits antimicrobial activity against a number of multi-resistant bacteria. When you have a sore throat or cough, it's a good idea to chew on a clove bud.

12. Cypress

Research shows that camphene, a component in cypress oil, inhibited the growth of nine different bacteria. Cypress essential oil is highly valued for its ability to aid the respiratory system and fight infections. Cypress oil can clear congestion and eliminate phlegm buildup in the lungs and respiratory tract. The antispasmodic properties in cypress oil can treat respiratory ailments such as coughing and congestion due to colds, bronchitis, and asthma. A study published

in the Journal of Agricultural and Food Chemistry in 2004 found that camphene, a component in cypress oil, inhibited the growth of nine different bacteria.

13. Basil

Basil leaves. To reduce coughing and congestion from allergies, simply add a drop of basil oil into soups or salad dressings. Basil is an essential oil known to decrease inflammation from allergies, and it works by detoxifying the body from viruses and bacteria. A study published in the journal Letters of Applied Microbiology in 1998 found that five varieties of sweet basil oil showed potent antimicrobial activity against most of the bacteria examined. To reduce coughing and congestion from allergies, simply add a drop of basil oil into soups or salad dressings. You can also support the respiratory system by diluting two to three drops of basil oil in equal parts of coconut oil, and then applying that mixture topically to your temples, chest, and the back of the neck.

14. Rosemary

Rosemary oil is effective against drug-resistant strains of bacteria. Rosemary essential oil is known to relieve respiratory disorders such as whooping cough, asthma, sinus infections, and bronchitis. This makes rosemary one of the better essential oils to diffuse for coughs, congestion, and colds. A study published in the journal Molecules in 2013 found that rosemary oil is effective against drug-resistant strains of bacteria.

How to Use Essential Oils for Cough, Colds, and Congestion

Here are three ways to use essential oils to help relieve coughs, colds, and congestion.

1. Aromatherapy

Aromatherapy is an effective practice to relieve coughing. Simply add a few drops of the desired essential oil into a diffuser for relief from coughs, colds, the flu, sinus infections, or congestion. A diffuser breaks down essential oils into smaller molecules that spread into the air.

2. Topical Application

Many people also prefer essential oils for topical use. In this process, the oils are applied to the skin, hair, nails, teeth or mouth. However, due to their high potency, it's important to dilute and blend your essential oils with carrier oils such as fractionated coconut oil (best), jojoba, avocado or sweet almond. The mixture can then be applied to the affected area.

3. Oral Application

Many essential oils can also be ingested by mouth, but the oils must be safe and pure. The Food and Drug Administration (USA) has approved certain essential oils for internal use with the generic designation for human consumption known as GRAS (generally recognised as safe). doTERRA sell high quality essential oils, well above the GRAS standard and are the only essential oil tested 12 times. A drop of essential oil can be added to a glass of water or tea, or a teaspoon of honey. You can also add a drop or two under the tongue, into a capsule or into your meal.

Homemade Essential Oil Cough Syrup Recipe

There are natural ways to use essential oils for coughs, colds and congestion relief. Conventional cough syrups contain lots of sugar. As an alternative, try a homemade cough syrup that will naturally boost the immune system and soothe your throat. It does not take long to make, and all it requires are a few essential oils and some honey. Below is a simple recipe.

Ingredients:

- 1 drop lemon essential oil
- 1 drop peppermint essential oil
- 1 drop lavender essential oil
- 1 drop frankincense essential oil
- 1 tsp honey

Directions:

Place the honey in a jar and add the essential oils. Mix well. Swallow the mixture.

Natural Essential Oil Vapour Rub Recipe

This homemade vapour rub can help soothe the throat and improve breathing. It contains essential oils and other natural ingredients. Here is an easy to follow recipe.

Ingredients:

½ cup virgin coconut oil

¼ cup extra virgin olive oil

¼ cup beeswax, grated

20 drops eucalyptus essential oil

20 drops peppermint essential oil

Directions:

Place the coconut oil, olive oil and beeswax in a large mason jar. Put 50ml of water in a saucepan over medium to low heat. Place the jar in the water and allow it to melt and stir to combine the oils. Cool the mixture and add the essential oils. Pour the mixture into jars or tins with lids. Allow the mixture to set. Use on your chest for congestion and cough relief.

Risks of Essential Oils

The right essential oils for coughs, colds and congestion can be a great addition to any treatment program. But that said, it's always critical to understand how to use essential oils. Pregnant women, children, infants, seniors and those with severe illnesses should consult with a specialist before using essential oils. It's best to use with carrier oil initially if not sure that you are sensitive to the oil.

Using Essential Oils to Treat Earaches & Infections

The ears are a very sensitive part of the body and we should use caution when applying essential oils near them.

First of all, avoid applying essential oils, both neat and diluted, directly into ears. Essential oils really shouldn't be put inside of an ear.

There's just recipe below that lists any placement of oils inside the ear very far (the simple cotton ball insert). It's important that one only uses that recipe if they've had their ear checked and the eardrum is not punctured.

Below are five recipes which should provide you with some immediate relief from your discomfort.

1.) Simple Outer Ear Cotton Ball Remedy

NOTE: This first recipe is for non-serious earaches caused by infections or a cold. If your earache is regular, persistent or severe you should avoid putting essential oils inside the ear and visit a doctor.

Ingredients:

- 6 drops of the one or a mixture of the following oils (Basil, Cajuput, Roman chamomile, Eucalyptus radiata, Lavender, Rosemary, Tea tree)
- 1 tsp extra virgin olive oil or sweet almond oil
- 1 absorbent cotton ball

Directions:

- Combine carrier oil with essential oils in a 5 ml glass dropper bottle
- Apply 3 drops of the resulting mixture to a cotton ball and place in the external opening of the ear

- Repeat 3 times per day, as needed

2.) Simple Hot Compress

Ingredients:

- 3-5 drops lavender and/or chamomile
- hot, soaked cloth

Directions:

- Soak your cloth in very hot water, ringing out the excess
- Drop your essential oils onto the hot cloth
- Apply gently to the affected ear as often as desired

3.) Simple Soothing Massage Blend

Ingredients:

- 2 drops lavender
- 2 drops chamomile
- 1-2 drops tea tree
- 1 tsp carrier oil (argan, coconut,sesame, sweet almond, jojoba,grapeseed, macadamia)

Directions:

- Combine ingredients
- Gently massage around the painful area
- Apply twice daily or more if desired

4.) Simple Cotton Ball Insert

NOTE: It is important that you apply oils inside the ear only after the ear drum has been examined by a doctor and shows no signs of perforation.

Ingredients:

- 2 drops lavender and/or chamomile
- 1 tsp warm almond oil or olive oil
- 1 absorbent cotton ball

Directions:

- Warm your oil and mix essential oils in with it
- Soak your absorbent cotton ball in the warm oil
- Gently insert the cotton ball into the outer ear

ADD/ADHD

InTune (Focus Blend)

Helping to enhance the senses and sustain focus, the InTune blend is perfect for staying on task when you are trying to study or concentrate.

Primary Benefits

- Enhances and sustains a sense of focus
- Supports efforts of those who have difficulty paying attention and staying on task
- Study-time blend

Ingredients

Amyris Bark, Patchouli Leaf, Frankincense Resin, Lime Peel, Ylang Ylang Flower, Hawaiian Sandalwood Wood, Roman Chamomile Flower essential oils

Vetiver oil

In 2001, a study done by Dr. Terry Friedman found that vetiver oil is effective in treating children with ADHD. The case study was conducted for two years (1999-2001), and it involved 40 children between 6 and 12 years old. Twenty of the children were not diagnosed with ADHD — they served as the control group — and 20 children were diagnosed.

The essential oils that were used in the study were lavender, vetiver, cedarwood and Brain Power (which is a blend of **frankincense**, sandalwood, melissa, cedarwood, blue cypress, lavender and **helichrysum essential oils**). The essential oils were tested one at a time for 30 days per oil; the children used an inhalation device at night and inhaled the essential oil about three times day when they were feeling “scattered.”

The final results were extremely promising — **lavender oil's benefits** were apparent, as it increased performance by 53 percent, **cedarwood essential oil** increased performance by 83 percent and **vetiver oil increased performance by 100 percent!** The study found that the relaxing and calming properties of vetiver oil helped the children combat their ADHD and ADD symptoms, which typically include difficulty in concentrating, diminished focus, being easily distracted, difficulty with organization and following directions, impatience, and fidgety behavior. The research that is being done to support vetiver oil, and other essential oils, as an effective **natural remedy for ADHD** is an exciting and much-needed prospect.

Improves Body Function

Vetiver oil boosts the immune and nervous system, as it's a natural tonic. A 2015 study conducted in India found that vetiver oil plays a protective role in the body by lessening the toxic results of a chemotherapy drug called cisplatin, which is used to treat cancer of the testicles, bladder, ovaries or lung. Because of its antioxidant activity, vetiver oil significantly inhibited DNA damage, clastogenic effects and cell cycle arrest in the bone marrow cells of mice that were given cisplatin for five consecutive days.

Vetiver oil's soothing and restorative attributes are also responsible for stimulating the immune system and supporting the nervous system. When we're stressed, adrenaline and cortisol flood the body; our blood pressure, breathing and heart rate increases. Glucose is then released into the bloodstream for ready energy. Digestion, growth, reproduction and immune system functions are suppressed or put on hold when we feel tense and anxious, and blood flow to the skin is decreased while pain tolerance is increased.

Ridding yourself of stress impacts your brain, heart, digestion, immune system and every other system in the body, so **natural remedies for anxiety**, like vetiver oil, can be extremely useful.

Soothes Anxiety and Nervousness

Traditionally, vetiver oil has been used in aromatherapy for relaxation and alleviating emotional stress, panic attacks, trauma, anxiety, insomnia, hysteria and depression. A 2015 study investigated the effects of vetiver oil as a tool that helps with anxiety and the neurological actions in the central amygdaloid nucleus. The central amygdaloid nucleus connects with brainstem areas that control the expression of innate behaviors; it's responsible for the perception and results of emotions, such as changes in heart rate, blood pressure and respiration. When vetiver oil was given to rats, it altered this neuronal activation from stress. In fact, vetiver oil had the same impact as Diazepam, a medication that treats anxiety, muscle spasms, seizures and other medical conditions.

dōTERRA Emotional Aromatherapy™ System

With six proprietary essential oil blends representing common categories of emotional well-being, the dōTERRA Emotional Aromatherapy System makes emotional aromatherapy easy and accessible for anyone dealing with common negative emotions. Use the Touch version for children.

Description

The dōTERRA Emotional Aromatherapy System is a revolutionary organization of aromatic plant families around a continuum of emotions for a simple, profound approach to using fragrant essential oils in emotional aromatherapy applications. Individual essential oils can be used with great effectiveness by skilled aromatherapists. dōTERRA makes emotional aromatherapy easy and accessible for anyone dealing with common negative emotions with a new line of proprietary essential oil blends representing six categories of emotional well-being. Each delicate blend contains CPTG Certified Pure Therapeutic Grade® essential oils that can be used aromatically or topically to help balance and brighten your changing moods. Just a few drops of these naturally complex, fragrant blends can elicit profound emotional responses to help you let go of burdens, find comfort and encouragement, or inspire you to dream with passion again. This kit includes:

- dōTERRA Motivate®

Description

Are you frustrated at work? Have setbacks in spite of your best efforts shaken your confidence? Or has misplaced trust left you cynical more often than your best self should be? Then stop, reset, and restart with dōTERRA Motivate Encouraging Blend of mint and citrus essential oils. dōTERRA Motivate will help you unleash your creative powers and find the courage that comes from believing in yourself again. Go ahead and raise the bar—you can do it! Features Peppermint Plant, Clementine Peel, Coriander Seed, Basil Herb, Yuzu Peel, Melissa Leaf, Rosemary Leaf, Vanilla Bean.

Description

Are life's anxious moments leaving you feeling overwhelmed and afraid? doTERRA Peace Reassuring Blend of floral and mint essential oils is a positive reminder you don't have to be perfect to find peace. Slow down, take a deep breath, and reconnect with the composed, collected you. Everything turning out fine begins with believing it will—and a few drops of Peace Reassuring Blend. Features Vetiver Root, Lavender Flower, Ylang Ylang Flower, Frankincense Resin, Clary Sage Flower, Marjoram Leaf, Labdanum Leaf/Stalk, Spearmint Herb.

Uses

- Use aromatically in an essential oil diffuser.
- Apply 1 or 2 drops in your palms, rub hands together, cup in front of your nose, and inhale deeply (do not touch eyes).
- Dilute and apply topically to aromatherapy touch points such as the back of the neck, on the wrists, and over the heart.

Cautions

Possible skin sensitivity. Keep out of reach of children. If you are pregnant, nursing, or under a doctor's care, consult your physician. Avoid contact with eyes, inner ears, and sensitive areas.

TOP 4 Essential Oils for DEPRESSION

Dr. Axe
FOOD • MEDICINE

1
Bergamot: Rub 2-3 drops into your hands and cup your mouth and nose. Breathe in the oil slowly. Try rubbing the oil on your feet and stomach, too.

2
Lavender: To relieve stress and improve sleep, put a diffuser by your bed and diffuse oils while you sleep at night or in the family room while you're reading or winding down in the evening. Also, it can be rubbed topically behind your ears for the same benefits.

3
Roman Chamomile: Inhale chamomile vapors to soothe your mind.

4
Ylang Ylang: To enhance confidence, mood and self-love, try diffusing the oil in your home or massaging it into your skin.

Make Over Your Mood

Maintaining a positive mood and attitude can be very challenging at times. Life can get pretty stressful, especially when trying to multitask. Chances are you are familiar with managing several tasks at once. In today's fast-paced environment, we often experience negative moods such as stress, discouragement, and fatigue. Just as being in a good mood gives you a sense of happiness and well-being, bad moods can also lead to negative feelings over time. When it comes to managing your mood, essential oils can help restore your emotional balance and improve your overall attitude in any situation.

Calm and Balance: Chill Out, It Will Be OK

WORRIED

- Cedarwood: Diffuse after a stressful day to relax the mind and body.
- Geranium: Diffuse aromatically to calm nerves.
